Second Member with compliments:

Provision of drinking water-wells in villages.

There is much dissatisfaction felt now at the way in which this programme is carried out. Responsibility is now divided between the Deputy Commissioner and the District Board. Each has a certain sum set apart for this purpose, *each spends L. independently of the other.* It seems to me that ~~any~~ of these two courses should be

followed:-

(1) Entrust the entire responsibility either to the Deputy Commissioner or to the President, District Board, or

(2) Ask the Deputy Commissioner and the President to meet and draw up a programme and make sure that it is carried out.

2) I shall be glad if the Member will go into this matter and issue suitable instructions to those concerned.

M.9
28-6-1932.

3) *Instructions complete
I should like to have
a note on the subject
by 28/6/32*

1) *Immed
28/6/32
The Supra will please
put into a note under
100-55. Keys.
28/6/33*

6) The suggestions made in the Dewan's minute are -

(1) that the Deputy Commissioner and the President of the District Board may meet and draw up a programme of well-works in villages and see that it is carried out or

(2) that the entire responsibility of carrying out the programme be laid on the Deputy Commissioner or the President of the District Board.

7) *under* G.O. Nos. L. 8923-40/V.P.

10-27-49 dated 21-6-1928 and 8367-76/V.P.

26-29-13 dated 16-5-1930 it has been directed that the Presidents of the District Boards and the Deputy Commissioners should meet once a year and draw up a programme for the sinking of drinking water wells in their Districts during the year after an examination of the ~~resources~~ ^{resources} available with the Deputy Commissioners and the District Boards.

8) The programme can only relate to works for which Government grants are to be made and such of the Panchayets or District Boards which do not require any grants cannot be affected by the programme drawn up by the Deputy Commissioner and the local bodies concerned will be responsible for carrying out such works.

9) As regards entrusting the responsibility for carrying out the programme, the programme will consist of 2 parts viz.,

(a) works subsidised partly from Panchayet funds,

(b) works subsidised partly from District Board funds.

of District Boards
The Presidents ^{of District Boards} were consulted in the matter of entrusting their well works to a Government agency in connection with the suggestion made by the Chief Engineer and they are not agreeable to the Deputy Commissioner being entrusted with the well works. In these circumstances it may be taken that the Presidents would not agree to entrust their works to the management of the Deputy Commissioner. The only point therefore for consideration is whether it is expedient to hand over the execution of works falling under clause (a) to the District Boards and if so, under what conditions. The Revenue Commissioner who is the Chief controlling authority in respect of Panchayets under the Village Panchayet Regulation will have to be consulted in the matter. In this connection it has to be considered whether the inclinations of the Village Panchayets concerned have also to be respected.

10) In another connection it was suggested that in order to expedite well works it was highly expedient to employ a gang of coolies for carrying out well works in villages. The file has been referred ~~to~~ ^{unofficially} to the Bureau of ^{Engineering} Sanitary ~~Engineering~~. ^{Engineering} The grant for well works from the year 1932-33 has been under G.C.No. G.7496-519/P.H.69-31-5 dated 19-3-1932 placed at the disposal of the Bureau of Sanitary Engineering. The Sanitary ^{also} Engineering may be consulted in the matter. It may be noted that the functions of the Officers of the Revenue Department of

5202

GENERAL SECRETARY
13 AUG 1932

Returned with compliments.

VS I do not find it easy to understand why a complete departure is suggested of transferring the administrative control over well works to the Bureau of Sanitary Engineering. The Dewan's minute referred only the division of the responsibility between the Deputy Commissioner and District Board President. I am not, in favour of the proposal of the Health Department to take up all Drinking Water Wells in villages under their direct supervision and control. The distribution of the Budget grants for wells may remain with Government, as at present. The administrative supervision and control over the wells and works and the funds allotted therefor to the Districts may also continue to vest with the Deputy Commissioners in the Revenue Department. This will, of course be under the general supervision of the Revenue Commissioner who is, under the Village Panchayet Regulation, the chief controlling authority in respect of all matters relating to the administration of Village Panchayets. As regards the agency for the execution of well works, the option may be left to the Deputy Commissioners. It should however be the standing rule that Deputy Commissioners should consult the Bureau of Sanitary Engineering on any scheme above a specified amount, say Rs.200/- or so, and that their technical advice and assistance in supervision, particularly in respect of large and important well works should be invariably obtained. Beyond this, I see no necessity for any change in the system.

24 As for the drawing up a programme of Well

Well Works by the Deputy Commissioner and the District Board President, jointly, orders have already issued in Government Order No.L.8367-76/V.P. 26-29-30 dated 16th May 1930, requiring that the Deputy Commissioners and the Presidents of District Boards should meet once a year and draw up a programme for the sinking of Drinking Water Wells in the villages in their Districts during the year. The need for observing this may be impressed on the Deputy Commissioners and the District Board Presidents.

S. Jayagopal

Revenue Commissioner.

40 The draft proposed does not seem to be quite suitable. It refers only to the Government Order of September 1932, which defines the relationship between the Bureau of Sanitary Engineering and the Deputy Commissioner, so far as the wells to be constructed out of the Government grants are concerned. The present draft is intended to emphasise the necessity for co-operation between the Deputy Commissioner and the President of the District Board as already laid down in the previous order of 16th May 1930. What is now required is to re-affirm this order with necessary amplification so as to meet any defects that have come to light in working the order.

41 I am not quite sure of the correctness of the Secretary's observation that the consultation by the Deputy Commissioner is to be confined to the second class of cases only. The idea of the order of 1930 seems to be that the entire programme for well works, whether they are to be financed purely by the District Boards or partly from Government funds should come within the purview of the consultation so that the wells taken by the District Boards on their own funds need not be taken up again by the Deputy Commissioner ~~and so on~~.

42 A revised draft may therefore be put up.

GENERAL SECRETARY
12 JULY 1932
No. 17

28
12/7/32

Esq., B.A., B.L.,
General Secretary to the Government of
H.H. the Maharaja of Mysore, Bangalore.

SIR,

I have the honour to forward herein enclosed for favour of perusal and orders of Government D.O. Letter No. S.E. 38 of 8th July 1932 from the Sanitary Engineer in regard to Drinking Water Wells in the State. The letter suggests the policy to be pursued in providing a safe drinking water supply. In abstract, it is the intention to take up all such wells under the supervision and control of the Bureau of Sanitary Engineering and for this purpose to vest the Annual Government Grants at the disposal of the Bureau. The procedure in allocating the grants amongst the Districts may perhaps be as follows:-

2. The Deputy Commissioner and the President, District Board in consultation between them draw up a programme of well works, the contribution from the District Board and Village Panchayat funds being indicated. This will be furnished to this Department when a proportionate contribution from the State funds will be made. The agency to execute the works on plans and estimates prepared in this Department, will be at the option of the Deputy Commissioner. It will perhaps ^{have to} be the District Board who have under their control Sanitary Inspectors with some knowledge of Public Works. The construction will be under the supervision of the Bureau of Sanitary Engineering whose staff will periodically inspect works till completion. This necessitates, as pointed out

by the Sanitary Engineer, an additional staff of four Sub-Overseers and two accounts clerks, their pay being charged to ~~Public~~ Works.

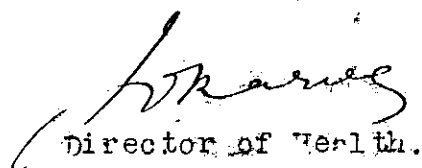

3. It seems to me that the Scheme outlined in the above and also given in detail in the Sanitary Engineer's letter would substantially help in equipping the rural areas with really safe drinking water instead of digging any kind of hole in the ground and calling it a well. An active sustained "WELL" policy under technical supervision is necessary if the rural areas in which live over 80 per-cent of the States' population is to be emancipated from the ravages of water borne diseases like typhoid, dysentery, cholera &c.

4. I therefore strongly commend the above proposals for favour of consideration of Government.

I have the honour to be

Sir,

Your most obedient servant

Director of Health.

D. O. No. S. E. 38
Encl. 3

"GRACE VILLE" PALACE ROAD,
Bangalore, (S. India), dated..... July 8, ... 1932.

Dear Sir,

DRINKING WATER WELLS IN VILLAGES.

I am forwarding herewith your file on the above. The expenditure on well works is being met from three different sources viz., Government grants, Village Panchayet funds and District Board grants. After the appointment of non-official Presidents for the District Boards, the Sanitary Inspectors who were working under the Deputy Commissioners and who were supervising the execution of these well works have been transferred to the District Boards and the Deputy Commissioners are deprived of this technical help.

9
 Some Deputy Commissioners raised a point that it will be desirable to transfer the execution of the well works to the Public Works Department. The Chief Engineer stated that he may require an additional staff of a Suboverseer for each Sub Division if these well works were transferred and that the Presidents of the District Boards who are the custodians of the funds may be consulted in the matter.

The Presidents of all the District Boards were opposed to this transfer as this will entail additional expenditure.

The control of the sinking of the tubewells for drinking water supply has already been vested with this Bureau. By mutual agreement with the Department of Industries and Commerce, the Bureau of Sanitary Engineering undertakes all initiative work in connection with water supply designs and assumes all responsibility for the completion of the

scheme. Plans and estimates are prepared and forwarded to the Municipality or Village Panchayet for their approval and for depositing the amount necessary for the completion of the scheme. The amount necessary for sinking the tube-wells is then released to the Department of Industries and Commerce from this deposited amount.

In the case of drinking water wells to villages, the same procedure may be adopted. The Bureau will assume all responsibility and prepare plans and estimates and forward them to the Presidents of the District Boards or to the Deputy Commissioners for their approval. The proportionate amounts received from the contributing agencies i.e., Government grants, Village Panchayet funds and District Board grants will be pooled and the necessary amount released to the Presidents of the District Boards for the execution of the wells according to plans drawn up by the Bureau. The execution will be carried out under the strict supervision of the Bureau and in strict accordance with standard plans drawn up by the Bureau and modified to meet variations in local conditions.

It seems necessary that Government vest the responsibility of construction of drinking water wells in some responsible agency trained in this particular field, with experience and knowledge of the importance and requirements of such installations. The Bureau of Sanitary Engineering can meet these requirements and the vesting of the control of drinking water wells under the Bureau will result in a marked improvement in the type of drinking water wells constructed. The practice of digging a hole in the ground and rivetting the sides to prevent collapse and calling such construction a drinking water well must be modified even at the expense of fewer number of wells constructed each year.

General Secretary to
Government.

July 8, 1932.

The present sources of drinking water supplies to villages, so called wells or step wells, act as pertinent indicators of the progress in rural reconstruction in the State. We find numerous instances of wells and step wells constructed for drinking water supply, but in reality are merely settling or septic tanks for the drainage of the entire village.

The policy of the Bureau of Sanitary Engineering is to inaugurate a safe drinking water campaign throughout the State. Such wells constructed under the supervision of the Bureau and located and designed in consideration of the possible sources of pollution will be labelled "APPROVED DRINKING WATER, DEPARTMENT OF HEALTH, MYSORE STATE" and will be inspected periodically and maintained by the staff of the Bureau of Sanitary Engineering. I am enclosing three types of well construction which might be adopted by Government for village drinking water supplies. The costs of such types will depend upon local conditions, but need not exceed amounts which are now expended for the present common type of well.

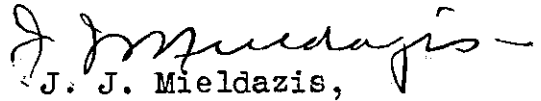

With the transfer of the Water Supply Division to the Bureau of Sanitary Engineering, the Bureau now has staff at Mysore City, Shimoga and Kolar Gold Fields in addition to the staff at Bangalore. Each station is situated so as to control two districts. As frequent supervision of the well construction and maintenance repairs must be undertaken by the Bureau of Sanitary Engineering, an additional staff of 4 Sub Overseers one for each station mentioned above and 2

P.T.O.

accounts clerks for the Central Office will be required.

The cost of this may be met from the Government grant.

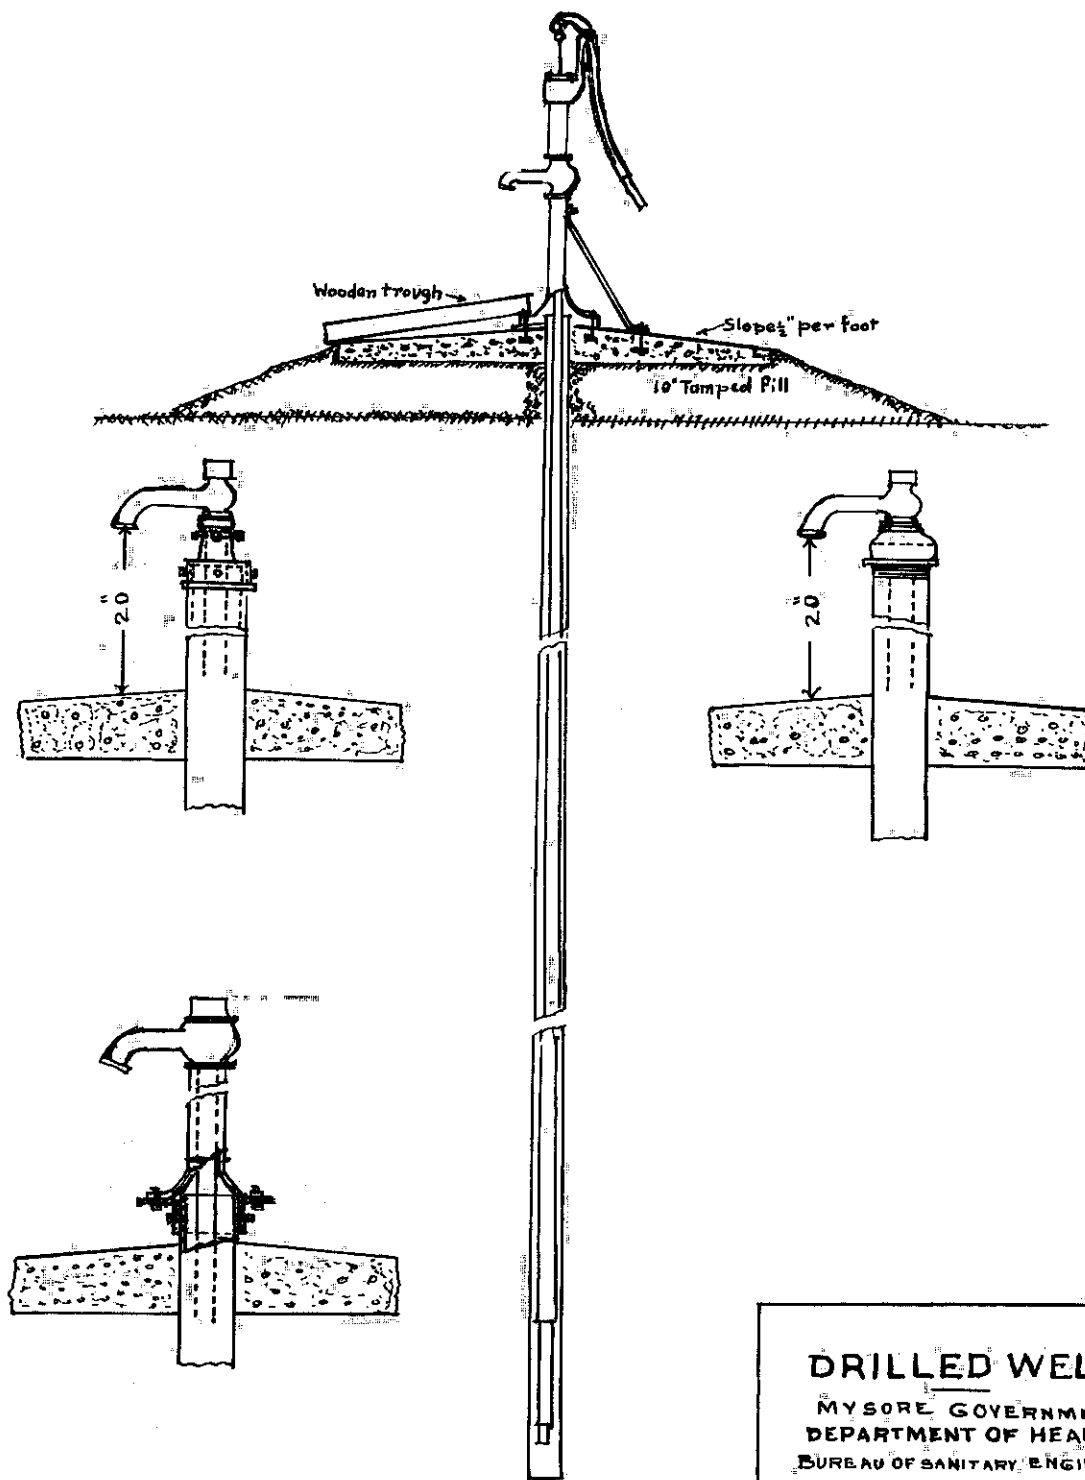

Sincerely yours,

J. J. Mieldazis,
SANITARY ENGINEER.

The General Secretary to
the Government of Mysore,
B a n g a l o r e.

PROCEEDINGS OF THE GOVERNMENT OF HIS HIGHNESS
THE MAHARAJA OF MYSORE.

Read :—

Government Order No.L.2367-76/V.P.26-29-30 dated 16th May 1930 directing that the Deputy Commissioners of Districts and the Presidents of District Boards should meet once a year and draw up a programme of well works to be executed in the District.

2. Government Order No.L.2467-86/V.P.67-31-3 dated the 30th September 1932 directing that the selection of villages to which grants have to be given for well works should be made by the Deputy Commissioners in accordance with a programme previously drawn up in consultation with the Presidents of District Boards as directed in the order read above and that the execution of well works should be arranged by the Deputy Commissioners concerned in consultation where necessary with the Presidents of District Boards.

ORDER NO: L-6016-357 V.P.67-31-H

Dated, Bangalore, the 15th March 1933.

17

In the Government Order of 16th May 1930 read above, it was laid down that the Deputy Commissioners of Districts and Presidents of District Boards should invariably meet once every year and prepare a programme of well works within the District. The idea of this order is that the entire programme of well works whether they are to be financed purely by the District Boards or partly by from Government funds should come within the purview of the consultation so that the wells taken up by the District Boards on their own funds need not be taken up again by the Deputy Commissioner. Government have reason to believe that this principle is not strictly kept in view with the result that execution of well works is not carried out systematically and in accordance with a definite programme and that the Deputy Commissioners and the

Presidents of District Boards spend independently of each other the grants available at the disposal of each. As this divided responsibility leads to unsatisfactory work, Government desire to emphasize the necessity for co-operation between the two authorities in this behalf so that the programmes are always drawn up every year in consultation with each other and carried out and the well works taken up therewith completed before the end of the year.

Execution of Well Works in the Districts.

Passes orders emphasizing the necessity for co-operation between the Deputy Commissioners and Presidents of District Boards in the matter of the —.

READ—

Government Order No. L. 8367-76—V. P. 26-29-30, dated 16th May 1930, directing that the Deputy Commissioners of Districts and the Presidents of District Boards should meet once a year and draw up a programme of well works to be executed in the District.

2. Government Order No. L. 2467-88—V. P. 67-31-3, dated the 30th September 1932, directing that the selection of villages to which grants have to be given for well works should be made by the Deputy Commissioners in accordance with a programme previously drawn up in consultation with the Presidents of District Boards as directed in the order read above and that the execution of well works should be arranged by the Deputy Commissioners concerned in consultation where necessary with the Presidents of District Boards.

ORDER No. L. 6016-35—V. P. 67-31-4, DATED BANGALORE, THE
15—17TH MARCH 1933.

In the Government Order of 16th May 1930 read above, it was laid down that the Deputy Commissioners of Districts and Presidents of District Boards should invariably meet once every year and prepare a programme of well works within the District. The idea of this order is that the entire programme of well works whether they are to be financed purely by the District Boards or partly from Government funds should come within the purview of the consultation so that the wells taken up by the District Board on their own funds need not be taken up again by the Deputy Commissioner. Government have reason to believe that this principle is not strictly kept in view with the result that execution of well works is not carried out systematically and in accordance with a definite programme and that the Deputy Commissioners and the Presidents of District Boards spend independently of each other the grants available at the disposal of each. As this divided responsibility leads to unsatisfactory work, Government desire to emphasize the necessity for co-operation between the two authorities in this behalf so that the programmes are always drawn up every year in consultation with each other and carried out and the well works taken up therewith completed before the end of the year.
